

# INB370/INN370 Assignment 1 Submission Procedure

This document outlines the steps you need to follow to submit INB370/INN370 Assignment 1. Please note that a number of automated tools will be used to assist with the marking of this assignment. To this end, please follow these instructions carefully so that your files are in the appropriate folders to be detected by our tools. **In particular, check that you have spelled the names of your Java packages, classes and methods correctly and that they are capitalised exactly as specified.**

## Exporting Your Eclipse Project

Your entire submission will be contained in a single zip archive taken from your eclipse project files. On disk, your eclipse project should have the following file structure (ignore the directories above):

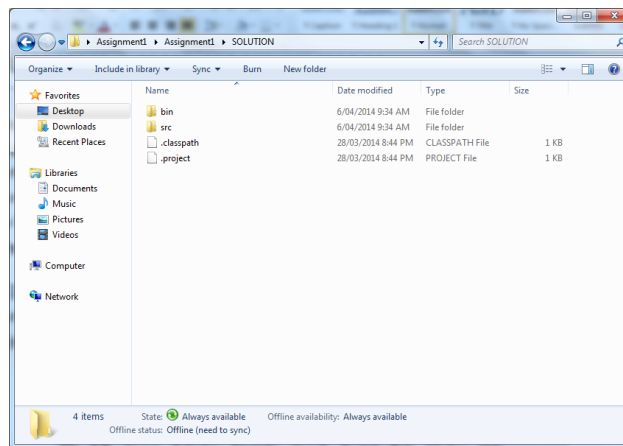

Figure 1 – The eclipse project files.

Down in the src directory, your project should include two packages, `asgn1Question` as provided in the release, and `asgn1Solution` which you will have created over the course of the assignment. Within the solution package, you should have the following files (the icons here are due to the brackets editor – see <http://brackets.io> if interested):

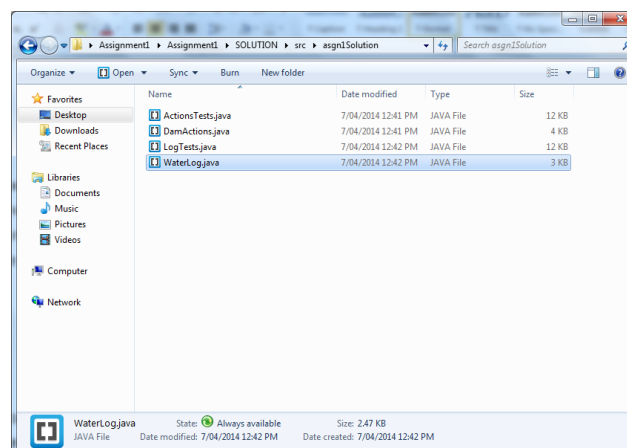

Figure 2 – The `asgn1Solution` package.

Please take note of the filenames, and the fact that the test files are there in this package as well. No dependencies on anything other than the files in this package and imports from package `asgn1Question` are permitted. Stepping up one level, we now copy the `asgn1Solution` directory and place it in some temporary directory which we call `submission`. Within this directory, we will have the `asgn1Solution` package directory, and a single `text` file called `submission.txt` which you may use to tell us anything special we need to know about your submission. Generally this should be used as a statement of completeness, but especially valuable if your submission is a bit weak or buggy. If all you have to tell us is “My submission is awesome”, you probably don’t need this file. Please note however, that the file should be `submission.txt` – NOT `submission.doc` or `submission.pdf`.

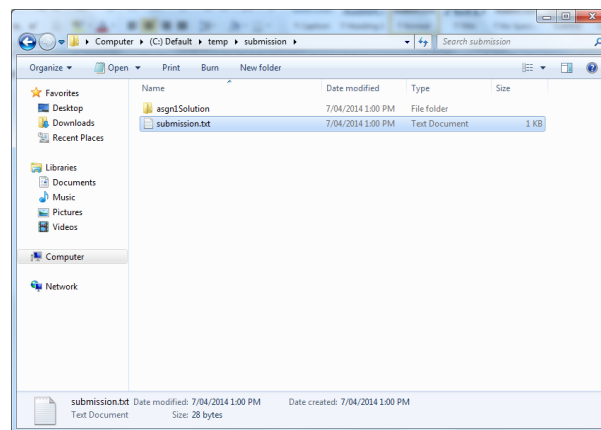

Figure 3 – The submission directory

Once you have this in place (figure 3), step up one level and create a zip in the usual fashion via the right click selection (figure 4). The resulting file, `submission.zip`, is your submission file.

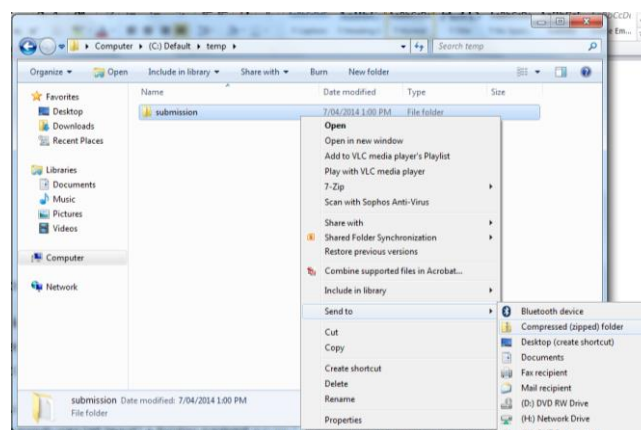

Figure 3 – Zipping the submission.

It is probably good practice to check that this archive actually works properly before you submit. The submission links are available in the assignment 1 directory in the Assessment section of each of the BB unit sites. We will contact people if we need them to supply their full eclipse project.

Please get in touch if there are any issues.
